

Boutique Hotel Technikum API - AWT 2026, Group AE

API and SDK Documentation

Version: 1.0.0

REST API for the Boutique Hotel Technikum booking application.

Availability

checkRoomAvailability

Check room availability

Checks whether a specific room is available for the given date range. Both checkIn and checkOut dates are required. checkIn must be today or later, checkOut must be after checkIn.

GET

```
/rooms/{roomId}/availability
```

Usage and SDK Samples

[Curl](#) [Java](#) [Android](#) [Obj-C](#) [JavaScript](#) [C#](#) [PHP](#) [Perl](#) [Python](#)

```
curl -X GET\  
-H "Accept: application/json"\  
"https://virtserver.swaggerhub.com/privat-c6a/HotelMario/1.0.0/rooms/{roomId}/availability?checkIn=&checkOut="
```

Parameters

Path parameters

Name	Description
roomId*	Long (int64) <i>Unique identifier of the hotel room</i> Required

Query parameters

Name	Description
checkIn*	date (date) <i>Check-in date (inclusive)</i> Required
checkOut*	date (date) <i>Check-out date (exclusive)</i> Required

Responses

Status: 200 - Availability result

Schema

```
▼ { }  
Required: available,checkIn,checkOut,roomId  
roomId: ▼ integer (int64)  
example: 1
```

```
checkIn: ▼ [] string (date)
          example: 2026-07-01

checkOut: ▼ [] string (date)
          example: 2026-07-05

available: boolean
          example: true

}
```

Status: 400 - Invalid date range (e.g. checkOut before checkIn, dates in the past)

Schema

```
▼ { []
  Required: message,status,timestamp
  status:   integer
            example: 404

  message:  string
            example: Room not found

  timestamp: ▼ [] string (date-time)
             example: 2026-06-15T14:30:00Z

}
```

Status: 404 - Room not found

Schema

```
▼ { []
  Required: message,status,timestamp
  status:   integer
            example: 404

  message:  string
            example: Room not found

  timestamp: ▼ [] string (date-time)
             example: 2026-06-15T14:30:00Z

}
```

Bookings

createBooking

Create a booking

Books a specific room for a given period. The room must be available for the requested dates. Guest details including name, email, and breakfast preference are required.

POST

/bookings

Usage and SDK Samples

Curl Java Android Obj-C JavaScript C# PHP Perl Python

```
curl -X POST \
-H "Accept: application/json" \
-H "Content-Type: application/json" \
"https://virtserver.swaggerhub.com/privat-c6a/HotelMario/1.0.0/bookings"
```

Parameters

Body parameters

Name	Description
body *	▼ { } Required: breakfast,checkIn,checkOut,email,emailConfirmation,firstName,lastName,roomId roomId: ▼ integer (int64) example: 1 checkIn: ▼ string (date) example: 2026-07-01 checkOut: ▼ string (date) example: 2026-07-05 firstName: ▼ string minLength:1 maxLength:100 example: Maria lastName: ▼ string minLength:1 maxLength:100 example: Musterfrau email: ▼ string (email) example: maria.musterfrau@example.com emailConfirmation: ▼ string (email) Must match the email field example: maria.musterfrau@example.com breakfast: ▼ boolean Whether breakfast is included example: true }

Responses

Status: 201 - Booking created successfully

Schema
▼ { } Required: breakfast,checkIn,checkOut,createdAt,email,firstName,hotel,id,lastName,room id: ▼ string (uuid) Unique booking reference example: a3bb189e-8bf9-4c89-9f7e-5884ba091b2e room: ▼ { } Required: description,extras,id,pricePerNight,title id: ▼ integer (int64) example: 1 title: string example: Deluxe Suite description: string example: Spacious suite with a king-size bed and city view. imageUrl: ▼ string Relative path to the room image example: /images/rooms/1.jpg pricePerNight: ▼ number (double) example: 149.99 extras: ▼ [] ▼ { } Required: id,name id: ▼ integer (int64) example: 1

```

    name:      string
               example: Wi-Fi

    icon:      ▼ [] string
               Bootstrap Icon name for this extra
               example: wifi

    description: string
               example: Free high-speed wireless internet
  }
]

}

checkIn:  ▼ [] string (date)
           example: 2026-07-01

checkOut: ▼ [] string (date)
           example: 2026-07-05

firstName: string
           example: Maria

lastName:  string
           example: Musterfrau

email:     ▼ [] string (email)
           example: maria.musterfrau@example.com

breakfast: boolean
           example: true

            example: 2026-06-15T14:30:00Z
}
```

Status: 409 - Room not available for the requested period

Schema

```
▼ { []
  Required: message,status,timestamp
  status:    integer
            example: 404

  message:   string
            example: Room not found

  timestamp: ▼ [] string (date-time)
            example: 2026-06-15T14:30:00Z
}
```

Rooms

getRoomById

Get room details

Returns full details of a specific hotel room including extras.

GET

```
/rooms/{roomId}
```

Usage and SDK Samples

- Curl
- Java
- Android
- Obj-C
- JavaScript
- C#
- PHP
- Perl
- Python

```
curl -X GET \
-H "Accept: application/json" \
"https://virtserver.swaggerhub.com/privat-c6a/HotelMario/1.0.0/rooms/{roomId}"
```

Parameters

Path parameters

Name	Description
roomId*	Long (int64) <i>Unique identifier of the hotel room</i> Required

Responses

Status: 200 - Room details

Schema

▼ { }

Required: description,extras,id,pricePerNight,title

id: ▼ { } integer (int64)
example: 1

title: string
example: Deluxe Suite

description: string
example: Spacious suite with a king-size bed and city view.

imageUrl: ▼ { } string
Relative path to the room image
example: /images/rooms/1.jpg

pricePerNight: ▼ { } number (double)
example: 149.99

extras: ▼ [{ }

▼ { }

Required: id,name

id: ▼ { } integer (int64)
example: 1name: string
example: Wi-Fiicon: ▼ { } string
Bootstrap Icon name for this extra
example: wifi
description: string
example: Free high-speed wireless internet

Status: 404 - Room not found

Schema

▼ { }

```
Required: message,status,timestamp
status:    integer
           example: 404

message:   string
           example: Room not found

timestamp: ▼ [] string (date-time)
           example: 2026-06-15T14:30:00Z

}
```

getRooms

List hotel rooms (paginated)

Returns a paginated list of hotel rooms with their details and extras. Default page size is 5 rooms per page.

GET

```
/rooms
```

Usage and SDK Samples

CurlJavaAndroidObj-CJavaScriptC#PHPPerlPython

curl -X GET\
-H "Accept: application/json"\
"https://virtserver.swaggerhub.com/privat-c6a/HotelMario/1.0.0/rooms?page=&size="

Parameters

Query parameters

Name	Description
page	Integer <i>Page number (0-indexed)</i>
size	Integer <i>Number of rooms per page</i>

Responses

Status: 200 - Paginated list of hotel rooms

Schema

▼ { []
Required: content,page,size,totalElements,totalPages
content: ▼ [[]
 ▼ { []
 Required: description,extras,id,pricePerNight,title
